Inception date: 1 June 1998
¹ Benchmark: S&P/ASX 200 Index (Total Returns)

Market commentary	The Australian equity market had a solid month, with the S&P/ASX 200 Index (Total Returns) rising 1.6%. Performance was consistent with global markets, with most major regions reporting gains. Local economic data was mixed but broadly weaker. Notably, the Reserve Bank of Australia reduced its forecasts for GDP growth and inflation in its quarterly Statement on Monetary Policy. This impacted bond yields, with Australian Government 10-year yields falling 17 basis points over the month. The Australian Dollar also weakened modestly against the US Dollar. Prices for most commodities were stronger, including iron ore, coking coal and oil. Most market sectors performed well, led by A-REITs (+5.3%), Information Technology (+4.5%), Energy (+4.1%) and Consumer Staples (+3.2%). Telecommunication Services (-1.6%) was weakest, followed by Financials (0.0%) and Consumer Discretionary (+0.9%).
--------------------------	---

Fund commentary	<p>The Fund had a positive return of 0.91% (after fees) for the month, underperforming the benchmark by 0.73%.</p> <p>Our overweight holding in Orica (-17.3%) was a significant detractor from performance. The company released a full-year result broadly in line with expectations, however, management guidance of significant cost headwinds into 2018 weighed heavily on the stock. Our overweight holding in Telstra (-3.1%) also underperformed, impacted by a soft first quarter trading update at its investor day and subsequently the announcement by NBN Co that it is slowing the rollout of the HFC network, thereby delaying the 1-off payments made to Telstra. The banking sector also contributed negatively. Whilst we were underweight to the poorly performing sector, individual stock exposures, including a significantly underweight exposure to the Commonwealth Bank of Australia (+2.3%) and an overweight exposure to the National Australia Bank (-6.5%), saw the sector detract from performance.</p> <p>Our overweight position in Origin Energy (+12.5%) was a significant positive contributor to performance. The stock outperformed following the announcement of larger than expected cost reduction targets for its Queensland LNG joint venture and was further supported by a higher oil price. Our overweight position in News Corporation (+18.1%) was another key positive. The company released a 1st quarter result well ahead of market expectations, with particular strength from its News and Information Services business. Our overweight position in Primary Health Care (+7.9%) outperformed, supported by the release of favourable October Medicare data. Our overweight holding in Incitec Pivot (+5.7%) contributed positively, delivering a full-year result that was well received by the market and benefited from improving fertiliser prices. Our overweight position in Harvey Norman Holdings (+6.1%) also performed well, with the company releasing a sales update for the 4 months to October showing continued strong momentum in the Australian franchised business.</p>
